

### INFO:

IOS is one of the most popular operating systems in the world after Android system. Apple recently added many security features and services to protect users' data from hackers and intelligence attacks.

## BASICS OF PROTECTION IN IOS SYSTEM

الحمد لله معز الاسلام بنصره ومذل الشرك بقهره ومصرف الامور بأمره ومستدرج الكافرين بمكره الذي قدر الايام دولا يعدله وجعل العافية للمتقين بفضله والصلاة والسلام على من أعلى الله منار الاسلام بسيفه وعلي اله وصحبه ومن تبعهم باحسان الي يوم الدين اما بعد

## Basics of protection in IOS system

IOS is one of the most popular operating systems in the world after Android system. Apple recently added many security features and services to protect users' data from hackers and intelligence attacks. But when it comes to US national security, Apple can not do but providing help to the intelligence agencies to track The jihadists and their supporters on the Internet, as happened with brother Sayed Farouk (may Allah accept him) the brother of San Bernardino operation, California, where Apple shared all the data of his device on the servers of the company with the FBI, so these are some of the basics of protection to Limit data sharing with Apple Although we do not recommend buying Apple products from the US, we recommend purchasing Nexus devices supported by the Cooperhead OS.

## Face ID

Face recognition is a new technology added by Apple in the latest version of the IOS system where the phone can recognize the face of the user and

use the fingerprint to unlock the device, but if the fingerprint is synchronized with Apple servers or your device has been hacked, that will reveal your identity so we advise to avoid using this feature as it is a threat to your privacy in this case.

To disable the Face Detection feature, go to Settings, Face ID & Password.

## Update system and applications

Software updates play a very important role to avoid the inconvenience of system users. The purpose is to push repairs to security problems in the operating system and create a secure system environment. When surfing the Internet, your system is at the mercy of your security procedures. Viruses, malwares and rootkits are always look for security gaps to use it to access your personal data, that's why users must always install system updates to receive security repairs.

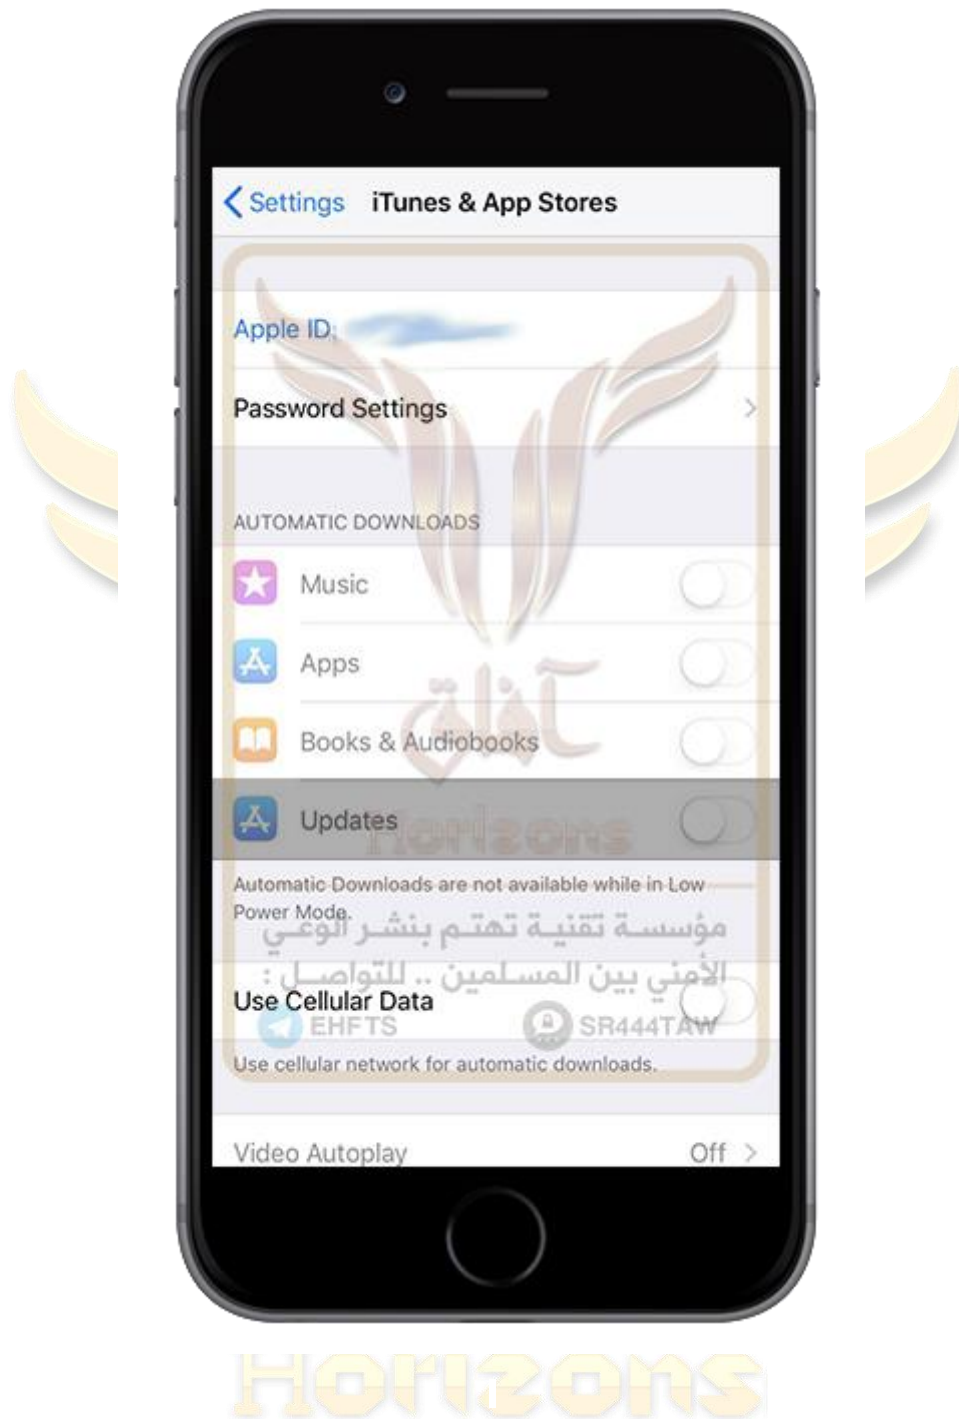

- Activate the AutoUpdate option by going to the App Store
- iTunes Store in settings and activating Updates.

Horizons

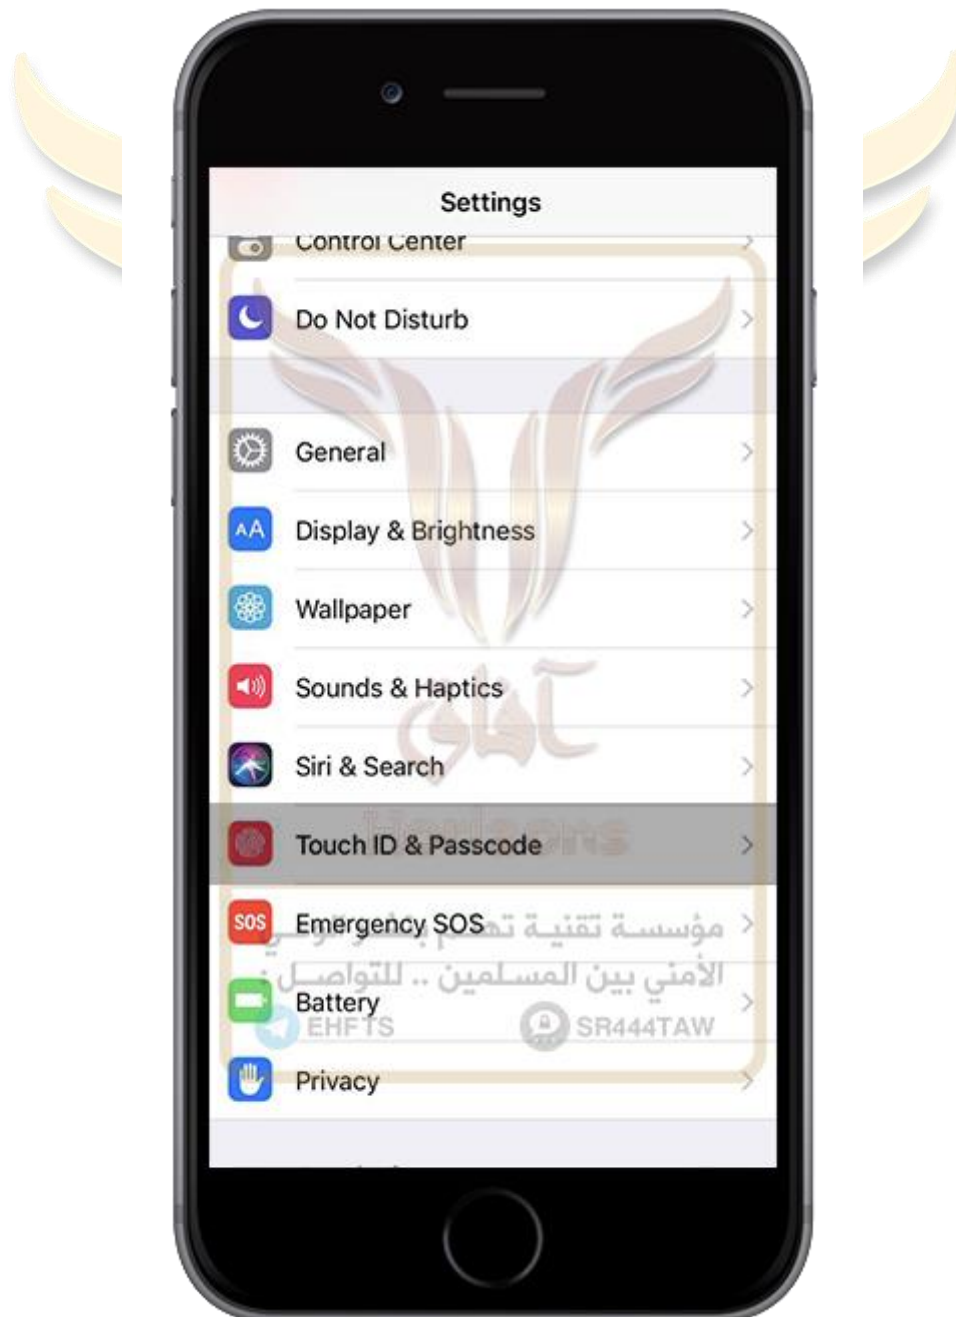

## Passwords

Choose a password composed of numbers, letters and symbols as users often use a password composed of 4 numbers for easy use, but in fact it

contains 10,000 combinations only, that the hack to the device can be easy. If you want to protect yourself, use numbers, letters and symbols to make it difficult to guess by the DICTIONARY ATTACK, but if you have to use the numbers, at least use the 6 numbers not the four numbers.

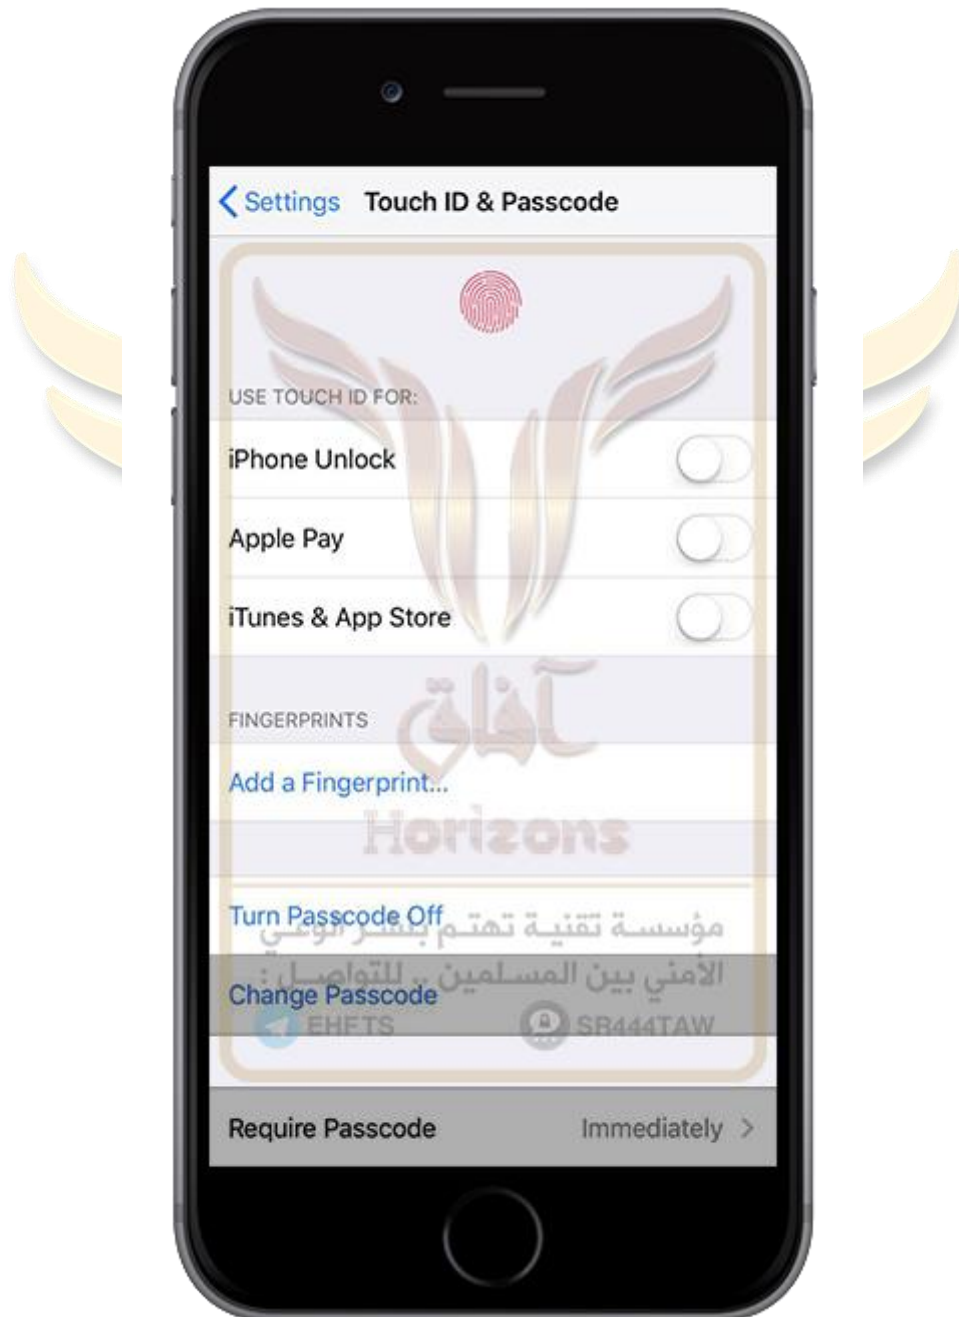

- Go to Settings, then Touch ID & Passcode.

- You will need to enter your current password.
- Set Required Access Passcode to Immediately.

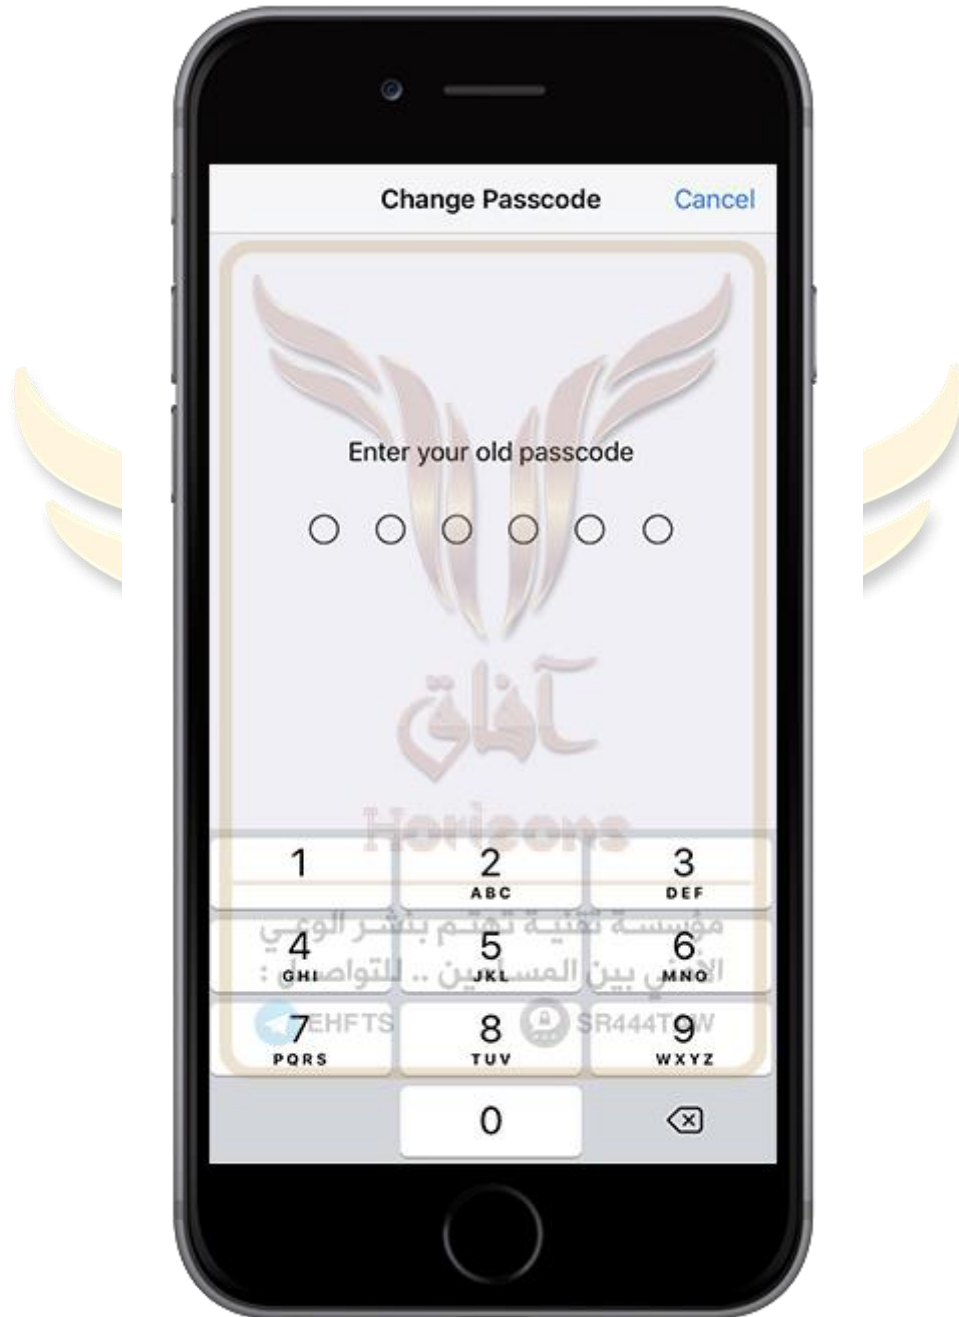

- Then click Change Passcode.

- Enter the old passcode.

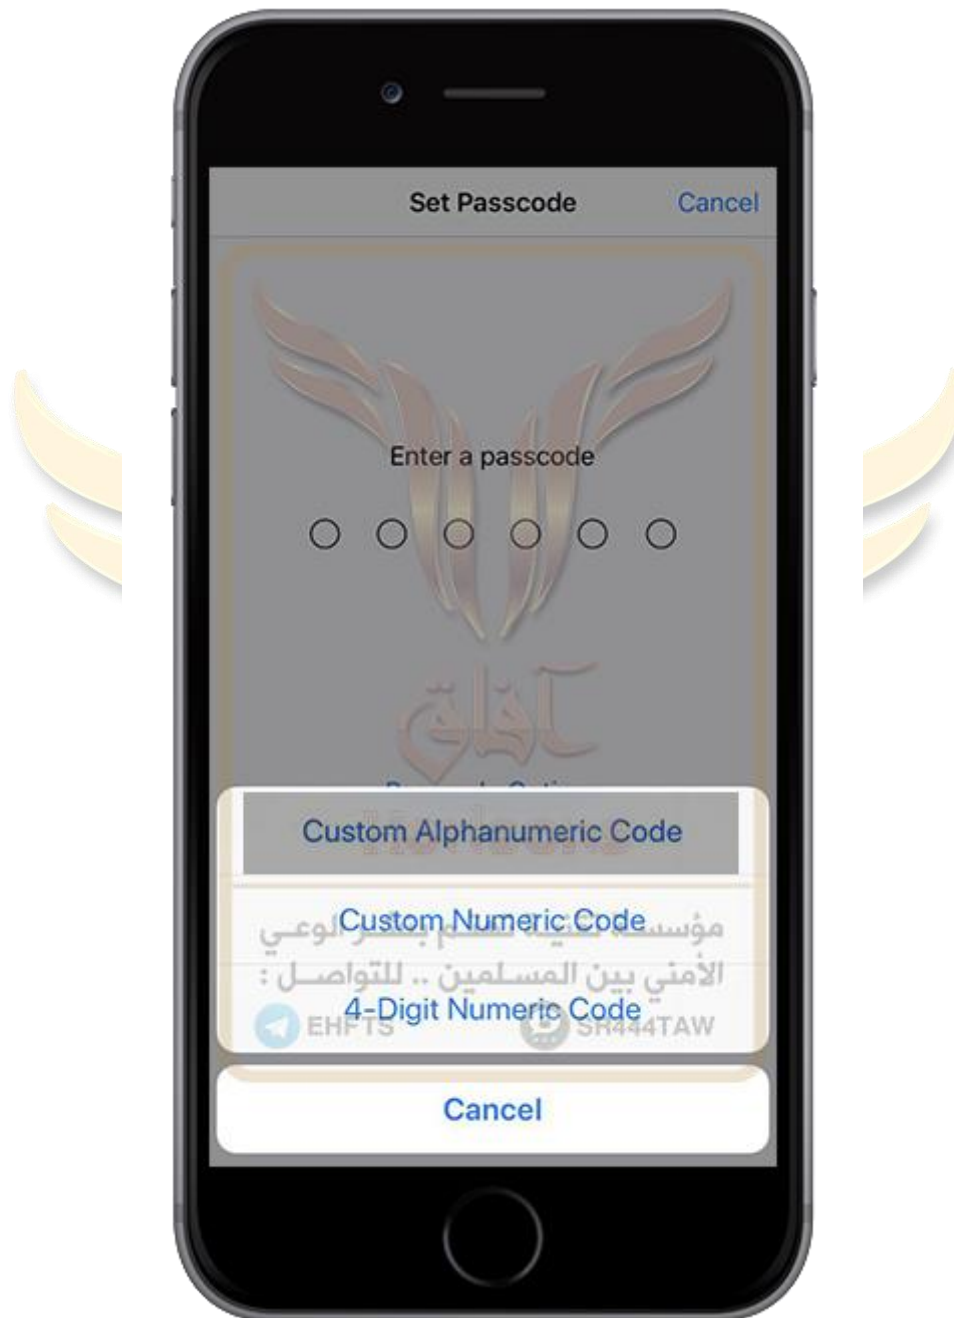

- Then click the Passcode Options and choose Custom Alphanumeric Code.

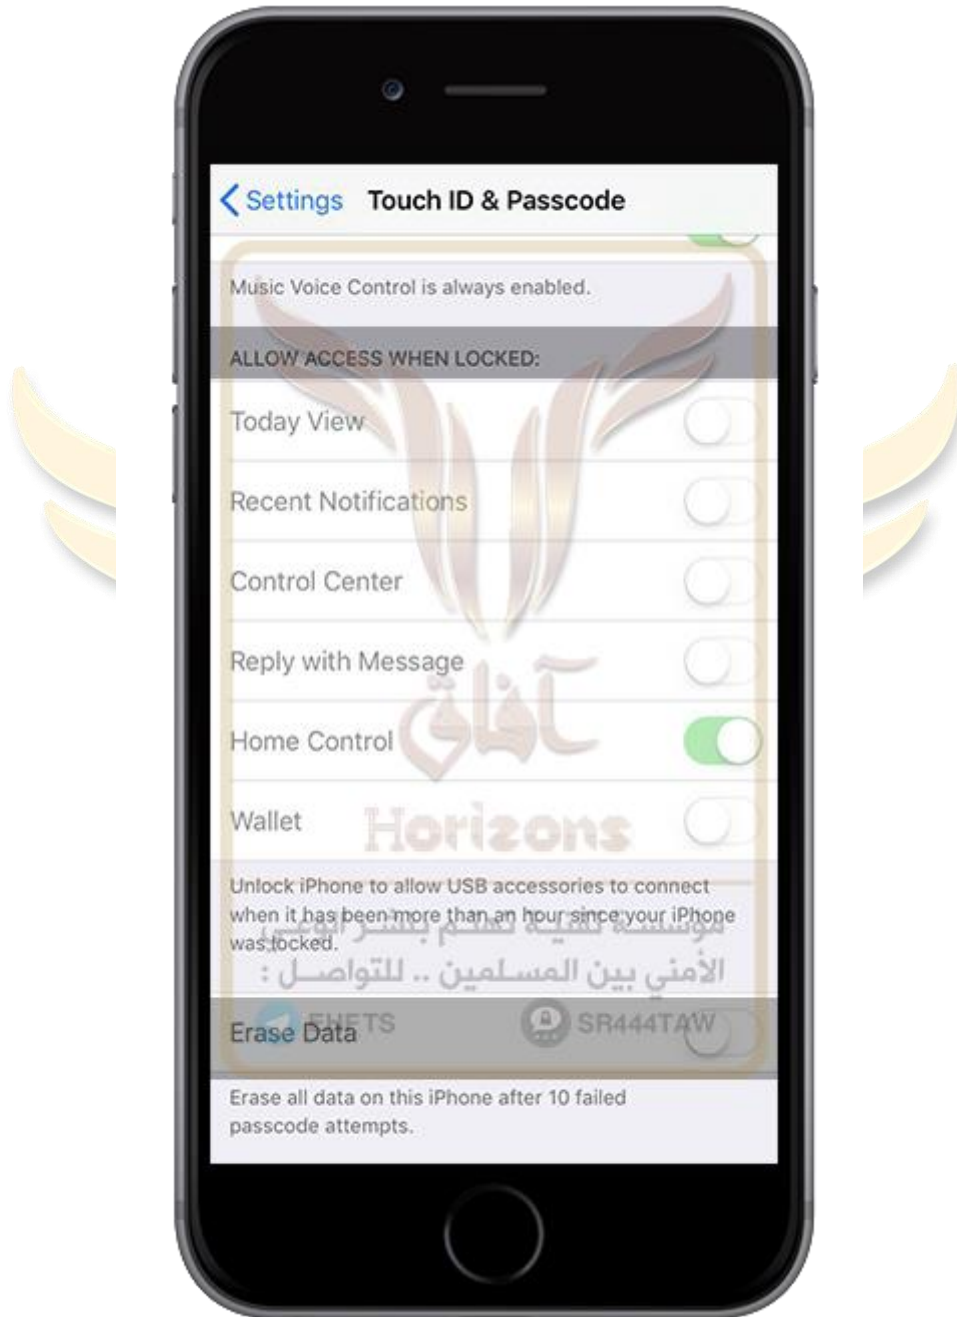

# Horizons

- Also disable alerts and messages on the lock screen by selecting options that allow access when locked.
- Enable data wipe after 10 failed access code attempts by choosing Erase Data and click enable.

## Maps and location services

Disable Maps by going to Settings, Maps. Be sure to disable all permissions. disable the site's services by going to Privacy.

- Location Services.
- Make sure that the Location Services is closed.

Horizons

**Go to Safari Browser :**

- Go to Safari Browser.

. Go to Privacy

- Then Analytics

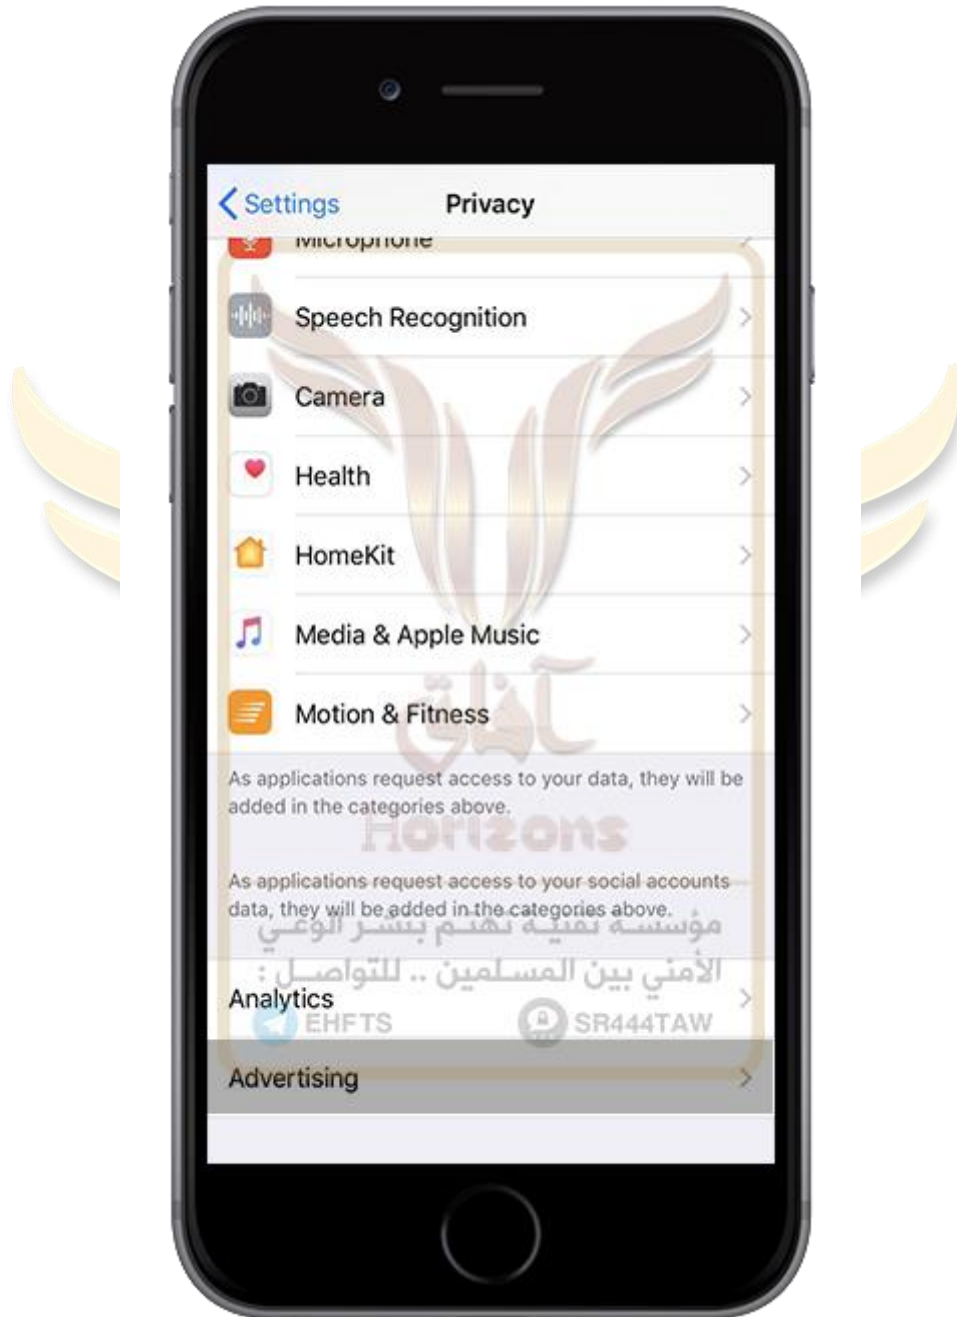

- Uncheck these options

- Apple can track your location to provide notifications and ads in your browser, to disable it. Go to Privacy and choose Advertising

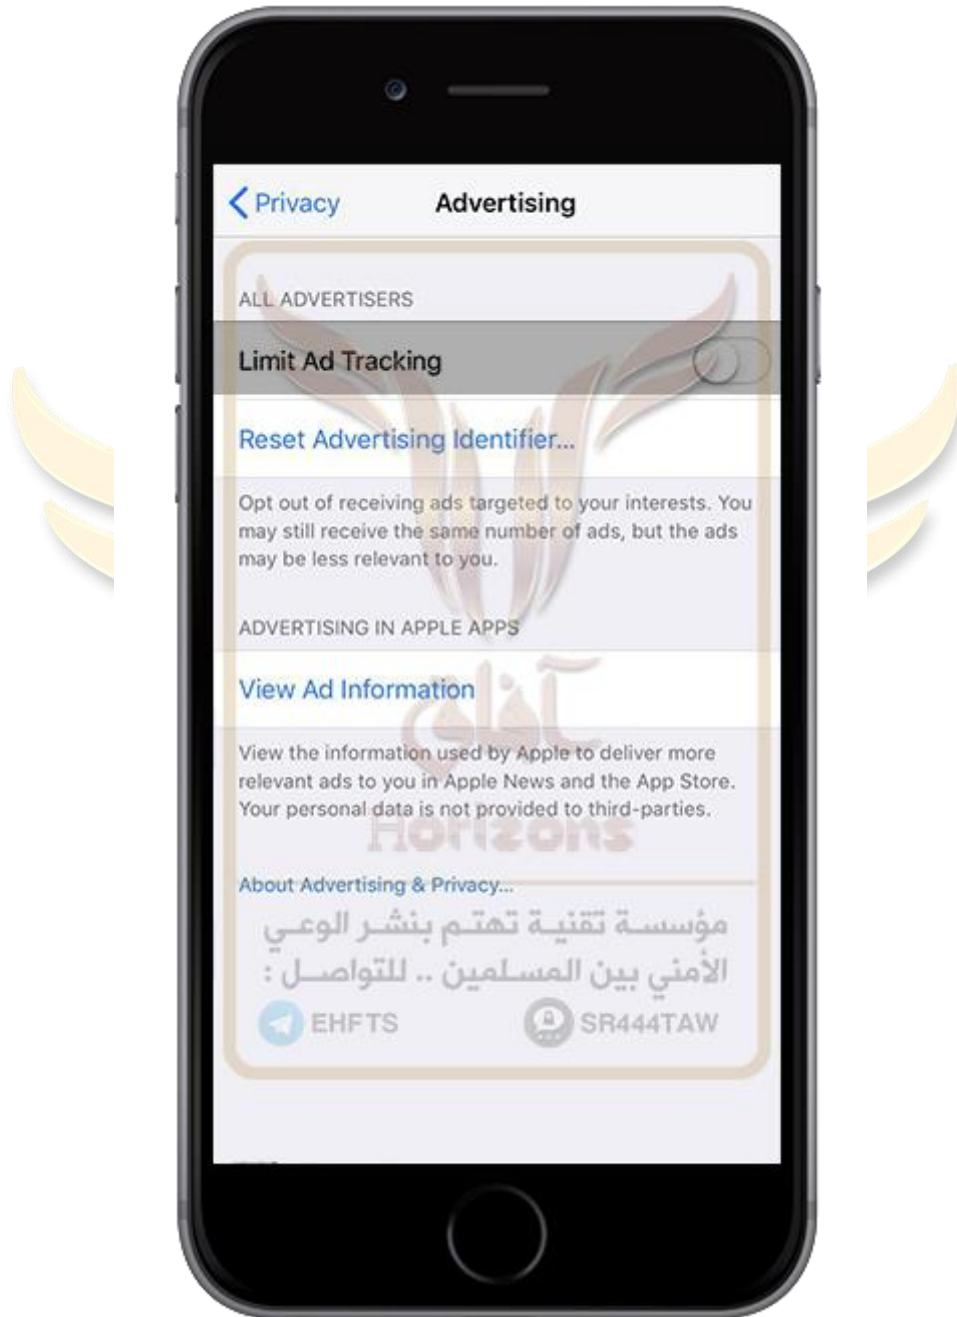

- Enable the Limit Ad Tracking option

**•Note:**

When this option is enabled, Apple will share your data and identity.

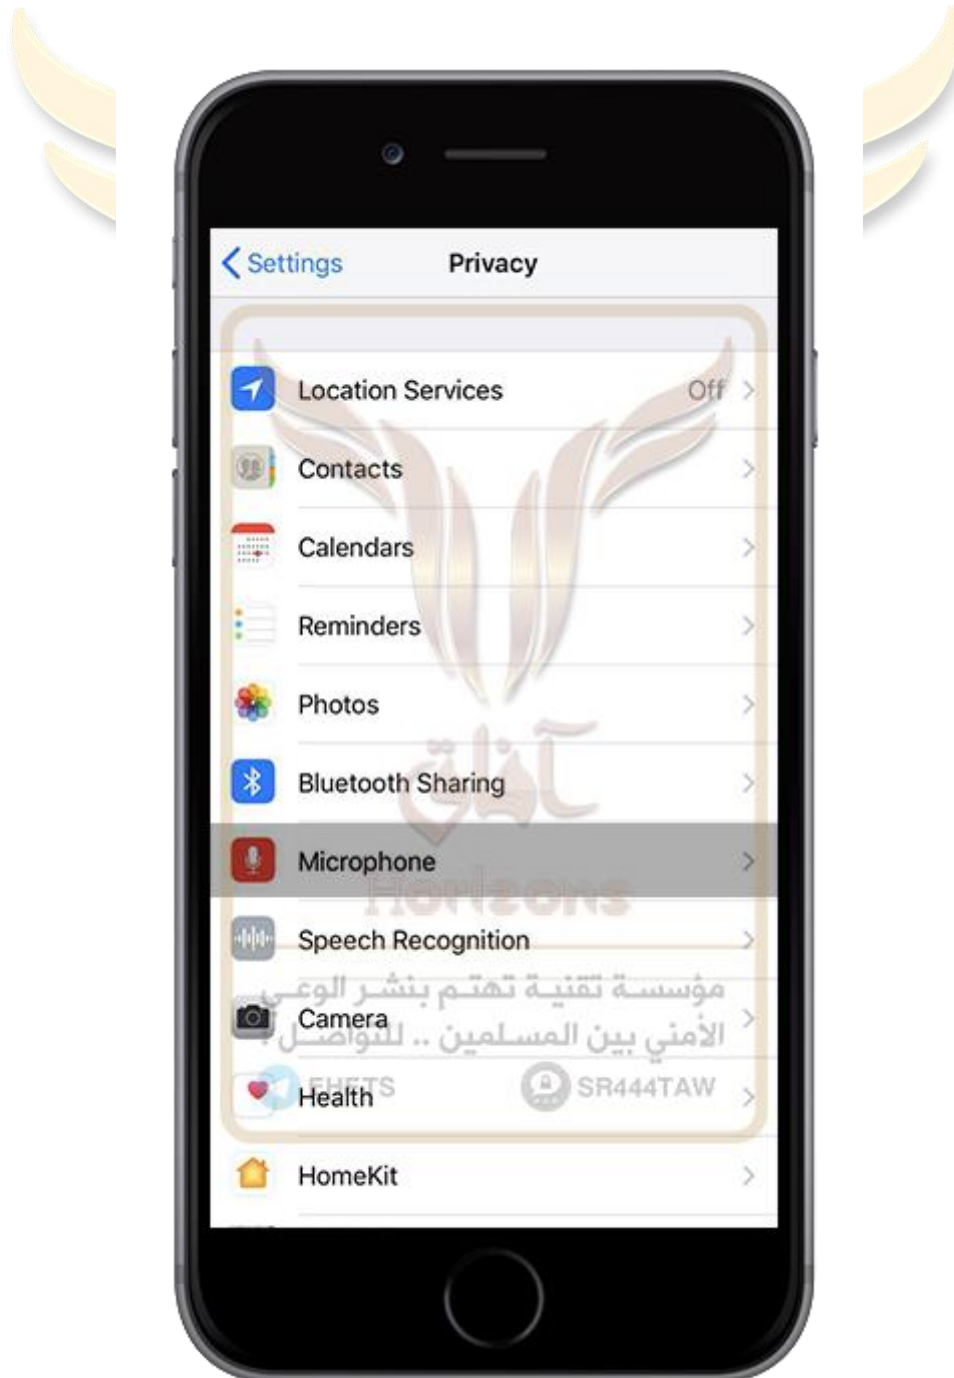

## Application permissions:

Any application that you download to your computer requires certain permissions to function correctly, but there are permissions that violate the privacy of users, for example, location rights, access to the microphone, camera, and synchronization of accounts and contacts. Some applications use this sensitive information for advertising purposes. You can learn how

to control application permissions and prevent them from accessing your personal information and maintaining your privacy.

- Block applications from accessing your camera - microphone - contacts - photos through settings and privacy. For example, when an application is denied access to the microphone, go to Privacy then Microphone as in the following picture.

## Recently deleted photos:

Apple saves deleted images in a folder called “recently deleted” for 30 days before the images actually gets deleted. If someone can access your phone, they can access any photos that were deleted within 30 days of that time.

- Delete the images in the “recently deleted” folder

**Do not synchronize the iCloud :**

Be sure to stop the iCloud Drive
